Boston, MA | habengeb26@gmail.com | (617) 820-3212

PROFESSIONAL SUMMARY

Business Analytics graduate student at Boston University with applied project experience in SQL reporting, Python data modeling, financial analysis, KPI tracking, and decision-support frameworks. Brings nearly four years of professional experience in high-volume financial document processing and operations, combining analytical coursework with real workplace discipline in accuracy, deadlines, and cross-functional coordination.

EDUCATION

- Boston University, Metropolitan College**
M.S., Business Analytics.

Boston, MA
Expected Jun 2027

Relevant Coursework: Business Analytics Foundations (MET AD 571), Python/SQL Business Analytics (MET AD 599), Financial Concepts (MET AD 632), Quantitative & Qualitative Decision Making (MET AD 715)
- Bunker Hill Community College**
Associate Degree. GPA: 3.94.

Boston, MA
Dec 2024

Relevant Coursework: Programming, database concepts, systems analysis, technical problem solving
- Sheba University**
Bachelor's Degree in Management. GPA: 3.92.

Mekelle, Tigray, Ethiopia
Dec 2022

Build Fellowship
Certificate: Behind the Scenes — How Cities Choose Software. Completed applied Apr 2026 public-sector technology procurement training focused on software selection, workflow analysis, stakeholder needs, and vendor evaluation.

Boston, MA

EXPERIENCE

- Mail Operations Representative**
Ascensus

Mar 2022 – Dec 2025
Newton, MA

- Processed high-volume financial and retirement-plan documents with strict attention to accuracy, confidentiality, deadlines, and operational controls.
 - Reviewed, sorted, scanned, indexed, and routed documents using enterprise systems while maintaining clean records and reducing processing errors.
 - Supported daily production targets by tracking work, identifying exceptions, documenting issues, and coordinating with internal teams to keep workflows on schedule.
 - Applied data accuracy practices to analytics projects, including validation, clean documentation, consistent naming conventions, and deadline-driven delivery.
- Operations Support**
ABM Industries

Jun 2023 – Present
Boston, MA

- Coordinated vehicle movement, customer requests, safety procedures, and shift priorities in high-traffic service environments.
 - Maintained professional communication with customers, supervisors, and team members while managing time-sensitive operational tasks.
 - Demonstrated service quality, process discipline, and fast decision making under pressure across concurrent priorities.

PROJECTS

- Strategic Decision Support Project**
MET AD 715 - Quantitative & Qualitative Decision Making

2026

- Prepared a managerial decision report evaluating whether a Boston restaurant should invest in a \$150,000 turnkey 40-barrel microbrewery system with 8 tanks, on-premise retail sales, and wholesale keg distribution.
 - Analyzed marketing and finance decisions spanning customer segmentation, competitor positioning, pricing strategy, production capacity, operating costs, staffing, and financial feasibility.

- Applied decision-support tools across simulation cycles, including SWOT, PESTEL, Porter Five Forces, break-even analysis, what-if analysis, sensitivity analysis, KPI review, and financial statement interpretation.
- Compared simulation cycles and supported the stronger recommendation using projected results: approximately \$4.58M in 3-year revenue and \$2.07M in net income versus \$3.85M revenue and \$1.55M in the weaker alternative.

Data Analytics and Modeling Projects

2026

MET AD 599 - Python/SQL Business Analytics

- Cleaned, prepared, and validated structured datasets using Python and pandas, including missing-value handling, target-variable mapping, categorical encoding, feature selection, and train/test splitting.
- Built analytics workflows using scikit-learn pipelines, OneHotEncoder, StandardScaler, polynomial features, cross-validation, and GridSearchCV to compare models and reduce manual errors.
- Tested and documented models including linear regression, logistic regression, Ridge, Lasso, KNN, decision tree, and random forest, evaluating performance using RMSE, accuracy, and business interpretation.
- Wrote SQL queries using joins, self-joins, grouping, filtering, aggregations, views, and date filters to answer business reporting questions.

Financial Analysis and Business Case Projects

2025

MET AD 632 - Financial Concepts

- Applied financial concepts to evaluate revenue, costs, gross profit, operating income, net income, budgets, and profitability trends across business-case and simulation-based assignments.
- Connected financial statement logic to business decisions by explaining how pricing, cost structure, marketing spend, and operational assumptions affect profitability and risk.
- Translated financial analysis into plain-language recommendations for non-technical managers, bridging quantitative results with actionable business guidance.

Analytics Strategy and KPI Projects

2025

MET AD 571 - Business Analytics Foundations

- Developed analytics deliverables that defined business problems, identified stakeholders, selected performance metrics, organized data requirements, and connected analysis to decision-making goals.
- Applied business frameworks and reporting logic to evaluate opportunities, risks, market conditions, and performance gaps across class projects.
- Created management-ready summaries, charts, and recommendations that converted analysis into action steps for non-technical decision makers.

ERP Selection, RFP Scoring, and Vendor Evaluation - Public-Sector Finance Simulation

2026

Build Fellowship

- Built an RFP-style vendor evaluation model for a city finance department, using weighted scoring categories for functional requirements, technical integration, implementation services, pricing, usability, and vendor experience.
- Designed finance-focused demo questions and scoring criteria covering general ledger, budget controls, AP/AR workflows, procurement-to-GL integration, audit trails, role-based security, and export functionality.
- Created process-flow logic for ITB/RFP development, advertising, proposal intake, committee scoring, shortlisting, demos, negotiations, approvals, and contract execution.
- Translated qualitative requirements into a structured scorecard to compare vendors consistently and support a defensible recommendation to stakeholders.

SKILLS

Analytics & Reporting: Excel, Power BI, KPI tracking, dashboard design, data cleaning, data validation, trend analysis, management reporting

Data & Technical Tools: SQL, Python, pandas, scikit-learn, R, Microsoft Office, database concepts, basic Java

Financial & Business Analysis: financial statements, revenue/cost analysis, profitability review, budgeting concepts, break-even analysis, forecast support

Decision Support: SWOT, PESTEL, Porter Five Forces, VRIO, what-if analysis, sensitivity analysis, risk analysis, simulation comparison

Operations & Project Skills: workflow documentation, requirements gathering, process improvement, vendor evaluation, RFP scoring, cross-functional coordination
